Fil197-1221/Region: carboxyl-terminal nonbelical telopeptide
Fil222-1466/Domain: carboxyl-terminal propeptide #status predicted <CPR>
Fil222-1466/Domain: carboxyl-terminal propeptide #status predicted <CPR>
Fil238-1466/Domain: fibrillar collagen carboxyl-terminal homology <PCC>
Fil238-1466/Domain: fibrillar collagen carboxyl-terminal homology <PCC>
Fil238-1466/Domain: fibrillar collagen carboxyl-terminal homology <PCC>
Fil238-154/Cleavage site: Pro-Gln (procollagen N-endopeptidase) #status predicted
Fil53-154/Collage site: Pyrrolidone carboxylic acid (Gln) (in mature form) #status predicted
Fil51.1212/Modified site: allysine (Lys) #status predicted
Fil53.284,860,977,1106/Modified site: 5-hydroxylysine (Lys) #status experimental
Fil538-1094/Modified site: Gly-lic (Covalent) #status experimental
Fil648-949/Cleavage site: Gly-lie (collagenase) #status experimental
Fil106/Binding site: carbohydrate (Lys) (covalent) #status predicted

ONLY HYDROXYPRO AND THE ONLY HYDROXYPRO AND THE ONLY HYDROXYPRO IN POSITION X (IN THE G-X-Y UNIT IN THE ALPHA 1(I) CHAIN)).
                                                                                                                                                        -!- PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.
-!- FUNCTION: TYPE I COLLAGEN IS A MEMBER OF GROUP I COLLAGEN
(FIBRILLAR FORMING COLLAGEN).
-!- SUBNIT: TRIMERS OF ONE ALPHA 2(1) AND TWO ALPHA 1(I) CHAINS.
-!- TISSUE SPECIFICITY: FORMS THE FIBRILS OF TENDON, LIGAMENTS AND BONES. IN BONES THE FIBRILS ARE MINERALIZED WITH CALCIUM HYDROXYAPATITE.

Isolation and characterization of a sucrose carrier cDNA from
Spinach by functional expression in yeast.";
EMBO J. 11:4705-4713(1992).
-!- FUNCTION: RESPONSIBLE FOR THE TRANSPORT OF SUCROSE INTO THE
CELL, WITH THE CONCOMITANT EXPORT OF A PROTON (SYMPORT SYSTEM).
CAN ALSO TRANSPORT MALTOSE AT A LESSER RATE.
-!- PATHWAY: SUCROSE METABOLIC PATHWAY.
                                                                                                                                                                                                                                                              EUKARYOTA; VIRIDIPLANTAE; STREPTOPHYIA; EMBRYOPHYTA; TRACHEOPHYIA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ٠.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -1- SUBBULIT: THERE ARE SIX TYPE IV COLLAGEN ISOFORMS, ALPHA 1(IV)-
ALPHA 6(IV), BACH OF WHICH CAN FORM A TRIPLE HELIX STRUCTURE
WITH 2 OTHER CHAINS TO GENERATE TYPE IV COLLAGEN NETWORK.

-1- DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN NETWORK.
DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS
DOMAIN: (NC1) AT THEIR C-TERMINUS, FREQUENT INTERRUPTIONS OF THE
G-X-Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOMAIN (WHICH MAY
CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL
TRIPLE-HELICAL 75 DOMAIN.
-1- PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING
UNIT (G-X-Y) ARE HYDROXYLAFED IN SOME OR ALLO F THE CHAINS.
-1- PTM: TYPE IV COLLAGEN SO CONTAIN NUMEROUS CYSTEINE RESIDUES WHICH
ARE INVOLVED IN INTER- AND INTRAMOLECULAR DISULEIDE BONDING. 12 OF
THESE. LOCATED IN THE NC1 DOMAIN, ARE CONSERVED IN ALL KNOWN TYPE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -:- DISEAGE: DEFECTS IN COL4A5 ARE ASSOCIATED WITH X-LINKED ALPORT
SYNDROME (AS). ALPORT SYNDROME IS CHARACTERIZED BY PROGRESSIVE
GLOMERULONEPHRIIS. OFTEN ASSOCIATED WITH HIGH-TONE SENSORINEURAL
DEAFNESS, SPECIFIC EYE ABNORMALITIES (LENTICONOUS AND MACULAR
FLECKS), AND GLOMERULAR BASEMENT MEMBRANE DEFECTS. IN MALES, THE
TYPICAL TIME COURSE POR THE PROGRESS OF ALPORT SYNDROME IS:
HEMATURIA BY THE AGE OF 5 YEARS, DEAFNESS AND HYPERTENSION IN
EARLY TEENAGE LIFE, DETERIORATION OF RENAL FUNCTION BY AGE 20, AND
END-STAGE RENAL FAILURE SOON THREARFERR. FEMALES TEND TO FOLLOW A
MUCH MILDER COURSE AND RARELY GO INTO RENAL FAILURE.

-:- ALTERNATIVE PRODUCTS: TWO FORMS ARE PROBABLY PRODUCED BY
ALTERNATIVE SPLICING OF THE SAME GENE. THE LONGER FORM, FOUND IN
KIDNEY, INTRODUCES 2 EXTRA G-X-X REPEATS INTO THE TRIPLE-HELIX
DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NERI T.M., ZANELLI P., DE PALMA G., SAVI M., ROSSETTI S., TURCO A.E., PIGNATTI G.F., GALLI L., BRUTTINI M., RENIERI A., MINGARELLI R., TRIVELLI A., PINCIAROLI A.R., RAGAIOLO M., RIZZONI G.F., DE MARCHI M.; "Missense mutations in the COL4A5 gene in patients with X-linked
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20, AND
